DETAILED ACTION

Claim Rejections - 35 USC § 103

1. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson 4,231,699 in view of Braithwaite 4,069,637. Thompson shows a crawler frame for a construction machine having a center frame and right and left track frames disposed on the right and left sides of the center frame so as to extend in a back and forth direction, wherein the center frame comprises a central frame section and legs 63 for connecting the central frame section to the track frames, and the legs are formed from cast steel (col. 4, lines 1-32). Thompson does show legs of the center frame, but does not show the legs to have top faces that are convex or a cylindrical pipe shape in cross section. However, Braithwaite shows a similar crawler vehicle 10 where the tubular structural elements 48, 50 are shown to have top faces that are convex or a cylindrical pipe shape in cross section and casted steel. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify JP '128, as taught by Braithwaite, to include cylindrical cross section to improve the strength of the structural members of a crawler (col. 1, lines 34-46).

As concerns claims 3-8, the combination shows a joint flange section (Thompson figures 2-3) joined to the central frame section provided at the inner end of each leg and a joint flange section joined to a said track frame is provided at the outer end of the leg.
